

Additional CrafcO Products

Crack and Joint Sealant

Crafco formulates a wide variety of joint and crack sealants that meet and exceed Federal and State specifications. All CrafcO Sealants are guaranteed from start to finish. CrafcO has the broadest line of sealant in the industry making CrafcO your "one-stop shop" for all your sealant requirements. With four manufacturing facilities across the United States CrafcO guarantees efficient and timely shipping, supplying customers with product on-time, every time.

Pavement Joint Adhesive

Crafco Joint Adhesive is a unique polymerized asphalt product that is applied to the longitudinal cold joint interface between hot mix asphalt paving passes. A thin layer applied to the interface bonds less dense or segregated material together and waterproofs the joint apex, which prevents raveling and crack formation.

Spray Injection Patcher

The CrafcO Spray Injection Patchers are the most cost effective repair systems for pothole repair today. Distressed pavements are cleaned, tack coated, and filled in minutes by one continuous operation. This system can be used year round and is an ideal addition to your pavement preservation system.

PolyPatch

Crafco PolyPatch is a unique blend of polymer modified asphalt and select aggregate specifically designed for repairing pavement distresses too large for crack sealing and too small for re-paving.

Loop Sealant

Crafco Loop Sealant is widely accepted for use in sealing traffic intersection loop detectors. CrafcO Loop Sealant provides 100% encapsulation of the sensor wires. Applicator equipment also available.

Marker Adhesive

Both CrafcO Standard and Flexible Marker Adhesive materials assure marker buttons and lane reflectors stay where they are placed. Standard and Flexible Marker Adhesives are hot-applied bituminous based products that are accepted worldwide. Applicator equipment also available.

Roofing & Waterproofing

Crafco supplies a variety of bulk and packaged asphalt material used in the production of asphalt shingles, in the construction of built up roofing systems and for structural waterproofing. Applicator equipment also available.

TechCrete

Crafco TechCrete is the flexible solution for concrete repair and is a proven hot pour repair that is different from all conventional rigid repair methods. Once in place TechCrete will move with the pavement and will not de-bond or crack. With CrafcO TechCrete its a one time fix.

CRAFCO

AN **ERGON** COMPANY

Pavement Joint Adhesive

reduces crack formation
and raveling cold joint.

NCAT confirms Crafcro Joint Adhesive is the performance leader.

The National Center for Asphalt Technology (NCAT) study* on longitudinal joints has determined that Crafcro Pavement Joint Adhesive is the winner for reducing longitudinal joint cracks and joint failure over all other joint sealant products and techniques tested. The studies took place over a six-year period (Sept. 1995 - July 2001) and were performed in five states: Pennsylvania, Colorado, Michigan, Wisconsin, and New Jersey. These tests confirmed that longitudinal joints in asphalt pavement, if not treated, would encounter cracking, raveling and eventually fail due to water infiltration, thermal movement and low density. They have found that Crafcro's hot-applied modified asphalt composition effectively bonds paving passes together creating a watertight seal during thermal movement resulting in improved long-term performance of the joint with no significant cracking. This product is also effective for waterproofing exposed edges of asphalt concrete pavement areas such as at the curb gutter, and shoulder interfaces. Additionally, waterproofing can be assured where manhole covers and hand valves (gas, water, etc.) are installed in asphalt concrete pavement. Like other Crafcro products this product is easy to apply using Crafcro's Melter/Applicator equipment.

**For the complete NCAT study contact Crafcro.*

"Sealing the bituminous shoulders of concrete pavement is shown to reduce the total volume of water entering the pavement system by as much as 85% for a given rain event. Sealing the longitudinal edge joint on concrete pavements should be considered as a pavement preventative maintenance treatment".

Minnesota Transportation Board research report

Simple, Fast Application

No Special Preparation

No Paving Operations Delay

Reduces Costly Rehabilitation

Reduces Road Closures

Crafcro Pavement Joint Adhesive increases pavement performance with lower maintenance requirements and less traffic interruptions to public travel
