ENGINEERING BULLETIN

KOHLER 14HP ENGINES

OCTOBER 11, 2002

We have encountered periodic problems with the propane version of the 14 hp Kohler engines. We have discussed this situation with Kohler and determined that if you encounter a problem with one of these engines we would like you to contact the Crafco engineering department immediately. We will work through the factory to solve your problem. For problems with other engines please continue to see your local engine representative.
