

The Super Shot Melters are currently being manufactured with a new style of control box. This affects all of the Super Shots, with exception of the Super Shot 60.

This new control box houses all of the same controls as the previous one, as well as the engine ignition box, the hour meter and any optional engine gauges. As seen in the photo below, the standard control box will have the three outlets for the optional gauges covered. (The 44972 optional control box will come with a water temperature gauge, oil pressure gauge and voltmeter gauge. Call your Crafcoc representative for pricing on this option.)
